Release Notes Overview

The following corrections and/or enhancements are included in the .0935 update.

NOTE: This update requires districts to have Campus 2009.2 or Campus 2010.1.

Release notes provide the applicable personnel the ability to review the changes prior to accepting the release. It is advised that users review the release notes carefully and alert affected users in the organization to changes in the product.

Questions or concerns regarding this update should be directed to Campus Support via the Customer Portal (<http://support.infinitecampus.com>), or by calling the Campus Support toll-free number (888) 461-2004.

Product End of Life Dates

End of life for Campus 2009.2 is December 2009. Please plan accordingly.

End of life means that no further development (i.e., no bug fixes, enhancements, or state required changes) will be done on the identified version after the stated end-of-life date. Infinite Campus will release a final end-of-life update for the identified version by or shortly after the stated end-of-life date.

Localization

Mandated localization changes required by your state's department of education (DOE) and critical bug fixes will be released in Campus 2009.2 through December 2009. Please encourage your state's DOE to provide early announcements of any Localization changes.

General Availability

Access to the .0935 patch bundle will be made available when Campus Hosting accepts the modifications and enhancements in the release. Updates are applied to a district's sandbox site first. Upon review of the update and acceptance of the changes in the update, the production site will be updated.

Update requests are processed through the Customer Portal. If your Customer Portal account has not been updated to include a link to the Update Request, please contact your Client Executive.

Modifications Made to My Data (SIS-14151)

A number of modifications have been made to the My Data tool. The following is a list of updates made:

- Action buttons were updated on each tab within My Data. Users are now given two buttons, one for requesting a new record and a second button for requesting an update to an existing record.
- The Household Information window has changed. Current records now appear at the top, pending requests appear in a separate Pending Requests collapsible folder and processed requests appear within a separate Processed Requests collapsible folder.

- Records within the Household information window now remain highlighted if an update request is made on the record. This highlight is removed when a new record is requested.
- Information deemed as Read-Only now displays a message at the top of the editor stating “Read Only (create and update request to change data)”
- The Request List dropdown list now displays the correct amount of pending, approved and denied requests.
- Searching for addresses now presents a message to users if no results were returned stating they should close the search box to enter a new address.
- A Geocode verification has been added to address requests. Addresses now must pass this verification to be allowed within a request.
- Users who select a request within the process inbox are now redirected directly to the request with updated fields highlighted.
- Comments entered in requests now display.
- The Person Summary Report was displaying an older version of the report. This has been corrected.

Enrollment Cleanup Wizard Clarification (SIS-14920)

Users were reporting that the Enrollment Cleanup Wizard was incorrectly returning no enrollments to cleanup. This was not a functionality issue but a misunderstanding as to how the Enrollment Cleanup Wizard works.

To lessen confusion, the description above the Calendar list now states “Select the Calendar in which the student ended their enrollment.”

In addition to updating the Calendar description, the description for the Enrollment Cleanup Wizard editor has been updated as follows:

“This wizard will remove next year’s enrollments that were created using the Enrollment Roll Forward tool if either of the following is true:

- The student’s previous enrollment was ended prior to the last day of the previous calendar and the student has not re-enrolled in the same calendar and grade.
- The student fails to meet the Student Assignment requirements for next year’s enrollment.

FRAM Import Wizard Modifications (SIS-3192)

A number of modifications have made to the FRAM Import Wizard. The following lists all modifications made separated by Campus version as modifications are version-specific:

Campus 2009.2 and 2010.1

- Wording has been updated on the Import Wizard to now appropriately display as Food Service Import Wizard.
- An Exclude checkbox has been added. This is an optional feature that is not required for use. This checkbox will set an exclude flag on an application which will then omit the application from being included in the Verification process. An example of this is a district who receives the Direct Certification file after processing a number of applications for households where students are included in the Direct Certification file. These applications should not have been processed since the families are Directly Certified therefore the applications should not be included in the Verification since the households have already been verified by the State Agency. If the Exclude checkbox is used, the applications associated with students in the import file will have an exclude flag set and will not be included in the Verification process. If the Exclude checkbox is not used, districts can choose to manually delete or exclude applications for each of the households. If districts choose not to do this, applications will be included in the Verification process and potentially selected to be Verified.
- When a file was imported and a mismatch of data was found, the file would stop importing data beyond the point where the mismatch occurred and was not indicating this error within the Import Report. This has been corrected. Mismatched data will now report within the Import Report and the file will continue to import the remaining data.

Logic was updated upon Test or Import where the following occurs:

The Summary Section of the Import Report will now indicate the number of New, Ended, Removed and Existing eligibilities in the imported file as well as the number of Errors/Warnings existing in the file.

The Updated Records section on the Import Wizard will indicate a list of all student eligibilities from the source file that were updated in the database. There are three types of updated records:

New

- New indicates no current year eligibilities exist in the database. The new eligibility status from the source file is imported and the carry-over eligibility was appropriately ended the day prior to the start date set in the source file.

New/Ended

- New/Ended indicates a current year eligibility exists in the database. The new eligibility status from the source file is imported and the current year eligibility is ended. For example, an income, categorical or foster application with a start date prior to the start date set in the source file was already entered in the database; therefore the existing eligibility has to be ended the day prior to the start date of the imported eligibility. This is due to USDA requiring Direct Certification to take precedence over an income, categorical or foster application already on file for the current year. An application should not have been processed.

New/Removed

- New/Removed indicates a current year eligibility exists in the database. The new eligibility status from the source file was imported and the current year eligibility was removed. For example, an income, categorical or foster application with a start date the same as or later than the start date set in the source file was already entered in the database for the student, therefore the existing eligibility has to be removed since there cannot be two eligibilities existing for the same dates. This due to the USDA requiring Direct Certification to take precedence over any income, categorical or foster application already on file for the current year. An application should not have been processed. This will not remove the application from the database, only the eligibility associated with the application.

The Error/Warning section of the Import Report will not report any mismatches of data such as an incorrect date of birth, last name, first name, multiple student numbers or StateID's, missing data or incorrect file lengths.

The Existing Eligibility Records section will indicate if a current year Migrant, Runaway, Homeless or Direct Certification Eligibility Type exists in the database for a student and will not import a new Direct Certification eligibility for the student from the imported source file. These students will appear under the Existing section of the Import Report. This section indicates the student has a current year eligibility already and that someone will need to follow-up on the student to determine which Eligibility type should be indicated for the student for that year.

If the Exclude checkbox is selected, the Not Excluded and Excluded section will contain information. This checkbox will only exclude and report current year applications and not from previous years.

- Not Excluded indicates applications that were not excluded even though the Exclude checkbox was marked. There are a number of reasons why an application may not be excluded.
- If the application has more or less students than the import file, the application cannot be excluded. The import file must contain the same students as those existing on the application.
- If the application start date is prior to the start date set in the import file, the application cannot be excluded because the eligibility will have ended one day prior to the start date set in the import file.
- Excluded indicates applications that have the excluded flag set in Household Applications when the exclude checkbox is marked.
- An application is excluded if the start date falls on or after the start date set in the import file and all students on the application are included in the import file.

NOTE: An import cannot be undone once it has been imported. All records are updated upon completion of import. Users are advised to run a test prior to importing data.

NOTE: Each time an import is performed, the import file has to be edited to allow the file to be imported again. As it works right now, the Run an Import button does not function unless a new file is established each time the user wants to import a file. This is because each time an import is performed, the eligibility, eligibility type, school year, start date and date have to be set as well as the Exclude option if needed. The Import Wizard is currently being redesigned to allow for setting data after the mapping is saved as well as at the beginning of the mapping.

2010.1 ONLY

- A checkbox has been added to allow the use of header rows.
- A Date of Birth format has been added so the Last, First and Date of Birth mapping is used when a source file Date of Birth format type is selected. Date of Birth format will now map correctly to the Date of Birth format used in Campus.

2009.2 ONLY

- The header row needs to be deleted prior to importing a file otherwise the file will not import.

Modifications Made to Eligibility and Household Application Editors (SIS-15431)

A number of modifications were made to the Eligibility and Household Application Editors. Because some modifications varied between different versions of Campus, the following lists modifications sorted by version:

Campus 2010.1

- Default Expiration Date has been added to FRAM Preferences. This allows districts to set a district-wide end date for all application and eligibility end dates. Users must be aware that this is an optional feature. The date entered will not affect Temporary Status end dates. If a date is entered, any application end date set using the Application Wizard or via Household Applications will auto-populate with the Default Expiration Date set.
- Some applications were being split into two eligibilities if an eligibility start date populated a student's eligibility either by adding an eligibility manually or via the Application Wizard or Household Applications. This has been corrected.
- Applications pulled into the Verification Sample or were Verified were incorrectly allowed to be deleted or excluded. This has been corrected.
- Users must be aware that Applications that have been Verified cannot be amended.
- Users were incorrectly able to edit an eligibility associated with an application. This has been corrected.

- The Household Application Editor has been modified to now sort the Application List by Application Reference Number and start date, displaying the most recent application entered first.
- Users working within the Firefox web browser and using the Application Wizard were unable to process data on the final screen. This has been corrected.

Campus 2009.2

- Some applications were being split into two eligibilities if an eligibility start date populated a student's eligibility either by adding an eligibility manually or via the Application Wizard or Household Applications. This has been corrected.
- Applications pulled into the Verification Sample or were Verified were incorrectly allowed to be deleted or excluded. This has been corrected.
- Users were incorrectly able to edit an eligibility associated with an application. This has been corrected.
- The Household Application Editor has been modified to now sort the Application List by Application Reference Number and start date, displaying the most recent application entered first.

Health

Health Conditions Alerts (SIS-13925)

Health Conditions have been rewritten to provide more security to student information and remove the ability for users to see certain health information for that student. The following is a summary of those changes:

System Administration Health

- A System Preference has been added to allow the display of health flags. When set to yes, any condition marked as flagged will appear as checked by default when that condition is assigned to a student and the flag will appear by the student's name. If this preference is turned off, the flag will not display next to the student's name even if the box is checked in the Condition for the student.
- A checkbox has been added to the interface for the health condition to be marked as being flagged when it is assigned to the student. If a condition is marked as flagged in System Administration but not marked as flagged for an individual student, no flag will appear.
- An Active checkbox has been added to Conditions to enable users to retire conditions that are no longer used. For a condition to be available for assignment to a student, this box must be selected.
- A System Preference has been added to allow users to use the Campus default conditions in addition to their custom conditions, or just their custom conditions. When set to no, the conditions that display will only be custom ones provided by the district.

System Administration Student Programs

- The Caduceus icon has been removed from the program dropdown list. Programs that used this icon will remain.
- The Medical program type has been removed and replaced with text directing a user to create a medical flag in Student Health Conditions.

Student Information Health Conditions

- A checkbox has been added to the interface to be used when a condition is assigned to a student that will make a health alert flag appear next to the student's name. Start and end dates can be entered to determine when the icon should display.

- A text field has been added to collect user warning information for displaying the flag text. This is required when the Display Flag checkbox is marked.
- Checkboxes and labels for Auto-Accident related, Auto-Accident State, Employment Related and Other Accident Related have been removed.
- An Instructions text field has been added to alert the viewer to the proper care of the student who has a health condition.
- All existing condition values are marked as active.

Student Display

- A blue Emergency Medical Services (EMS) icon for a Condition Flag will display.
- All conditions will display a single flag next to the name. Hovering over the flag will display the alert information for all medical alert flags the student has, separated by a semi-colon.
- Selecting the new health condition flag will display a pop-up box that lists each health condition and instructions. Alert messages and instructions will also display.

Section Summary Report (SIS-11279)

The Section Summary Report has been modified to increase the usability of the report. The following is a summary of the changes:

Report Editor

- The report editor has been changed to include new options and movement of existing options.
- The default value of the assignment grid, assignment properties and grading task grid options is now checked automatically.
- The Grading Task Grid options now includes the ability to choose the following:
 - Show Percent and Final Grade
 - Show Percent Only
 - Show Final Grade Only
- The Class average will not be calculated and displayed unless the Show Percent and Final Grade or Show Percent options are chosen.
- The same nesting structure as the Lesson Planner is used on the Select Assignments list. This will follow the grading tasks that are children of a composite grading task.
- All grading tasks now appear in bold type.
- Composite parent tasks now appear in bold italic type and in larger font so they stand out from regular grading tasks.
- All Task/Standard groups now appear in standard text in a slightly smaller font size.
- Assignments now appear in a regular font size, slightly smaller than group information.
- Composite children grading tasks now include the percentage of the task and uses the same formatting as the Lesson Planner.
- All tasks and groups in the active term will be selected by default. This is the current behavior.
- When a parent grading task is selected, all children of that task will also be selected (current behavior).
- The Person ID is now referred to as the Student Person ID.
- The Random sort option is now truly random. If random is not selected, the report will sort by Student Person ID.
- If weighting on groups is used, the percent will display to the left of the group name in the Selection tree.

Report Display

- The Assignment Grade Column is now called the In-Progress Grade.
- The Assignment Average is now listed in Bold type.
- Alternate shading has been added to the rows in the grid table.
- Two tables have been created to display the posted Grading Task grades. The Legend table (first table) will list the Grading Tasks that make up the Grid table (second table).
- If no grading tasks are selected in the Assignment tree, the grading task tables will be hidden.
- A grading task will display in a separate set of tables using the Composite Legend and Grid only if the Parent Composite Grading Task is selected.

- Legends are sorted by Term.
- All decimals are to the nearest hundredth.

Modifications Made to Student Summary Report (SIS-14197)

A number of modifications have been made to the Student Summary Report. The following is a list of modifications made:

Grade Summary section has been added to the Student Summary Report editor. This new section features the following new checkboxes:

- Show Assignment Groups
- Show Total Points
- Show In-Progress Grade
- Show Final Grade
- Show Percentages
- Shade Alternate Rows

The Select Assignment list has been updated within the editor to better display grading tasks and composite grades. The name of this section has also changed. Select Assignment has become Select Grading Tasks, Standards and Assignments.

The description for the Student Summary Report editor has been updated.

A number of changes have been made to the Student Grade Summary Display on the report. The following lists changes made:

- The format of the Student Grade Summary has been modified to four columns. Column one contains Grading Tasks, Assignment Groups and Standards. Column two is called Total Points and displays point earned/points possible. Column three is called In-progress Grade and displays the percent and grade from the active gradebook. Column four is called Final Grade and displays posted grades.
- Assignment groups display in sequence number.
- All grades display exactly as they are entered in the grade book.
- All composite percent values display to the left of the corresponding task.
- Assignment group weights display to the left of the group name.
- Grade summary percentages now show two decimal places.

Changes were also made to the Assignment Display. The following is a list of changes made:

- All flags attached to assignments now display.
- Asterisks now displays in front of an assignment name if the assignment is not active, flagged as Ex or flagged as Dr.

- Race/Ethnicity reporting now uses the new Federal Race/Ethnicity fields in Census People Demographics area.
- RE-Hmong is now being collected.
- Home Language now reports the code from the Primary Language field on the Census Demographics tab.
- Indian Education no longer reports.
- English Learner Date First Enrolled now reports the date from the First US Enroll Date on the Census Demographics tab.
- NPS School Code has a change in logic to report only the last 7 digits of the number in NPS School if present.
- Validation for reporting Special Education Exit Date is based on if special education status is null instead of if primary disability is null.
- NSLP will also report Y for program code 178.
- The title in the Extract Editor test selection list from CAHSEE 0809 to CAHSEE 0910.
- The reporting population now includes students in Grades 10, 11, 12 or Adult Ed. Adult Ed is indicated by a State Grade Level of AD, regardless of Grade Name. AE chosen from the dropdown list on the editor also means Adult Ed.
- PostGrad12Student, will report Y if the student is an Adult Ed student, indicated by a State Grade Level of AD. Otherwise reports blank.

Additional Survey 5 Corrections (SIS-15932)

All additional known issues for Survey 5 have been corrected. The following is a list of corrections made:

Student Demographic Information

- Lunch Status was not converting status codes of 6 and 9 to code 2. This has been corrected.
- Field 33 Institution Number Neglected Delinquent 1 and Field 34 Institution Number Neglected Delinquent 2 were reporting incorrectly. If Field 33 reports a valid number, Field 34 will now report blank. If Field 33 is 0000 then Field 34 will report 0000. School numbers were also incorrectly reporting in these fields. This has been corrected.

Prior School Status Student Attendance

- Field 17 Withdrawal Code PK-12 now reports correctly.
- Field 2 School Number Current Enrollment now properly reports School Numbers N998 and N999. This field will not report School Number 3518.

Student Transcript Information

- This report was incorrectly reporting courses that were not High School classes. This has been corrected.

Student Discipline Referral Action

- Field 21 Lunch Status now correctly reports free and reduced codes
- Incident Types have been optimized and now report Y in fields 14, 15, 16 and 25 depending on the following criteria:
 - If Incident Type = ALC, report Y in field 14.
 - If Incident Type = DRD or DRU, report Y in field 15.
 - If Incident Type = WPO, report Y in field 16.
 - If Incident Type = BHA, report Y in field 25.

Vocational Student Course Schedule

- Both Error 31 and Error 49 were appearing for no reason. This has been corrected.

Vocational Teacher Course

- Error 6 is appearing on each record. This has been corrected.

Federal State Compensatory Project

- Students were reporting multiple times even if they had one record on their Federal State Support Services tab. This has been corrected.

Dropout Prevention Program

- Field 21 Fund Source has been corrected to only report codes D or Z.

English Language Learners Information

- Field 38 Fund Source has been corrected to only report codes Z or E.

Student Environment Safety Incident

- Corresponding Incident Type selection has been automated to report as follows:
 - If Incident Type = ALC, report Y in field 12.
 - If Incident Type = DRD or DRU, report Y in field 13.
 - If Incident Type = WPO, report Y in field 15.
 - If Incident Type = BHA, report Y in field 20.

Exceptional Student

- Students with a Placement Status of R, I or N now report. This change only applies to evaluations after the start of the 0809 school year.

New PI-1563 Pupil Count Worksheets Created (SIS-6163)

Two additional worksheets have been added as well as modifications to the PI-1563 Pupil Count. Age was not being calculated on the PI-1563 Summary Report. This has been corrected. Two new worksheets, 4 YR Old Information and Other Adjustments, have been added. The following describes each new worksheet and its logic:

4 Year Old Information Worksheet

The Report column on each 4 Yr Old Information section pulls values in that have already been calculated, determined, and reported on existing PI-1563 Pupil Count worksheets. That value is then broken down into categories based on age, resident status, and special education status.

When determining resident status, the following is considered:

- Resident student: Resident District drop down list under Enrollments > State Reporting Fields = database district or NULL
- Non-Resident student: Resident District drop down list does not = database district
 - Resident District drop down list: Enrollments > State Reporting Fields
 - Database District determination: System Administration > Resources > District Info > State District Number and Name

When determining if a student is special education, the following is considered:

- They must have a Locked Education Plan on the Effective Date of the report.
- Primary Disability must = anything other than NULL or N: Not Disabled on the Effective Date of the report
 - Student Information > Special Education > Documents

Cells that are shaded will report a value.

Summary of Preschool - Special Education:

Other Adjustments

Question 1

This section pulls the calculated value from the following section of the PI-1563 report:

- Resident Reductions worksheet
- < Full Time Student column
- Grades 1-12 category

It is then determined how many 9th, 10th, 11th, and 12th graders are included. Those values are then reported in the respective cell.

Question 2

This section of the worksheet considers each student that is reported in Question 1. An aggregate total of instructional hours the students are scheduled for the Semester are reported.

Determining Semester 1 and Semester 2:

- The number of terms is divided by 2.
- When there are an uneven number of terms, the number of terms is divided by 2. The middle term is then split in half. First half of the term is considered as Semester 1. Second half of the term is considered as Semester 2.

Determining Instructional hours:

- Student Information > General > Schedule
 - When determining which portion of the student's schedule to calculate, the Effective Date of the report is considered.
- System Administration > Calendar > Calendar > Periods
 - The number of minutes per period scheduled are added together.
 - Non-Instructional periods or Lunch Time are not considered.
- Calculation: Total Instructional minutes scheduled (multiplied by) Instructional Days set for the semester (divided by) 60 minutes.
 - When the calculation includes minutes, the value is rounded down to the nearest hour.
 - Example: If the calculation = 1,125 hours and 59 minutes, 1,125 will be reported.

Question 3

This section of the worksheet reports the annual hours of instruction for a full-time student for grades 9, 10, 11, and 12.

- System Administration > Calendar > Calendar > Grade Levels
 - State Grade Level must = 09, 10, 11, and/or 12
 - When grade levels share the same schedule structure, they will report the same value.

- When there are multiple schedule structures with the same grade level, the grade that has the maximum minutes is considered.
- System Administration > Calendar > Calendar > Periods > Instructional Minutes
 - When the school is on day rotations, each period schedule will be calculated.
 - Non-Instructional periods or Lunch Time is not considered.
 - If there are multiple schools selected, the calendars/schedule structures with the highest number of minutes is considered.
- Sys Admin > Calendar > Calendar > Days
- Calculation: Total Instructional Minutes (multiplied by) total number of Instructional Days for the school year (divided by) 60 minutes.
 - When the calculation includes minutes, the value is rounded down to the nearest hour.
 - Example: If the calculation = 1,125 hours and 59 minutes, 1,125 will be reported

Once the annual hours are calculated for each grade level, value will be reported in the respective cell.
